

Description

Throttle check valves model **TCM 10** are meant for controlling flow in one direction in circuit by simple throttling of flow. Reverse flow is free and is independent of throttle condition in opposite direction in same path. The valve is available with throttle check valve facility on either A port, B port or A and B ports.

These are non-pressure compensated flow control valves and therefore offer constant flow for a given setting, only if the pressure drop across the throttled passage is constant.

The valve can be converted from meter-in condition to meter-out condition by simply rotating the body along its longitudinal axis by 180 degree, while being installed.

Rotation of the throttling screw in clockwise direction, increase the pressure drop in the path.

For locking the setting, a check nut is provided.

For protection of the setting, a protective cap is provided.

Technical specifications

| | | | |
|----------------------------|---|--|----------|
| Construction | : | Modular, spool type, Non-pressure compensated. | |
| Mounting | : | Modular type, Conforming to 4401 - 05 - 04 - 0 - 94. | |
| Mounting Position | : | Optional. | |
| Direction of flow | : | For ports P and T free flow in either direction. For ports A and B refer Hydraulic symbols. | |
| Flow handling capacity | : | Refer graphs. | |
| Operating Pressure | : | 315 bar. | |
| Viscosity range | : | 10 cSt to 380 cSt. | |
| Fluid temperature range | : | -20°C to +80°C. | |
| Fluid cleanliness required | : | ISO 4406 20/18/15 or better. | |
| Mass approx. | : | Model | TCM10AB |
| | | in Kg. | 2.1 |
| | | Model | TCM10A/B |
| | | | 2 |

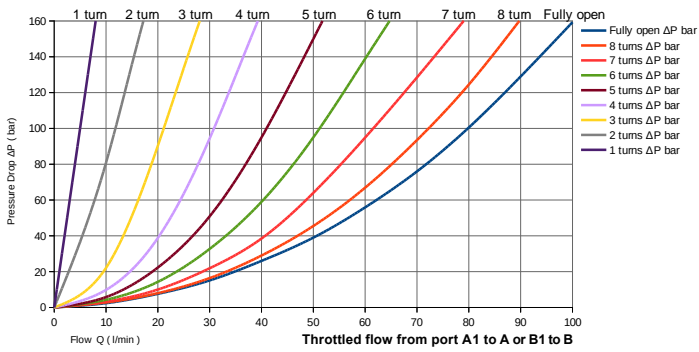

Unit dimensions

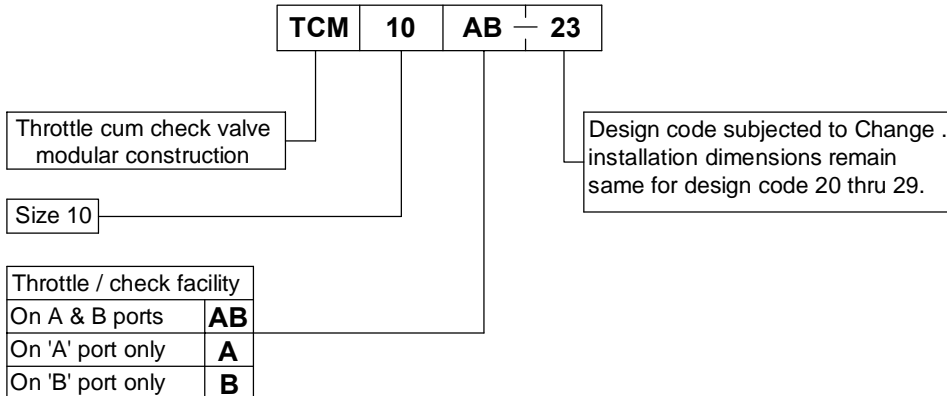

Note : Rotate the valve around horizontal axis 'X' - 'X' by 180° to convert from METER-IN control to METER-OUT control.
Valve fixing S.H.C Screws are not in scope of supply. Tightening torque for S.H.C Screws is 16 Nm.
