**1****Overview of valve bank (nominal size 6) type BA**

A valve bank combines different valves for operating independent consumers.

The directional valve bank type BA connects individual valve sections using sub-plates, thus enabling compact hydraulic manifolds to be assembled flexibly. Depending on what is required for the individual functions, it is possible to combine directional seated valves and directional spool valves in the bank.

The intermediate plates type NZP enable additional functions and contain, for example, pressure reducing valves, shock valves, load-holding valves etc. An intermediate plate can be inserted between the sub-plate and the directional valve. The valve bank can be directly flange-mounted to compact hydraulic power packs or used separately with a pipe connection.

**Features and advantages**

- Flexible combination of directional valves with standard connection pattern NG 6 (Cetop 3)
- Can be mounted directly to hydraulic power packs
- Hydraulic accumulator can be mounted directly

**Intended applications**

- Machine tools (cutting and non-cutting)
- Clamping tools, punching tools, fixtures

*Valve bank (nominal size 6) type BA*

**2.6 Solenoid voltage and connector**

Coding	Electrical connection	Nominal voltage	Protection class (IEC 60529)
X 12	EN 175 301-803 A	12 V DC	IP 65
X 24	▪ <b>X</b> : without male connector	24 V DC	
X 98	▪ <b>L</b> : with male connector with LED	98 V DC	
X 205	▪ <b>WG</b> : with male connector with alternating rectifier	205 V DC	
WG 110	▪ <b>L5K</b> : with 5 m cable connected	110 V AC 50/60 Hz	
WG 230	▪ <b>L10K</b> : with 10 m cable connected	230 V AC 50/60 Hz	

**i INFORMATION**

- The availability of additional solenoid voltages and solenoid male connectors is based on the directional valves used.
- The solenoid voltages and solenoid male connectors are specified at the end of the order coding and are applicable to all the solenoids on the valve bank.
- The specifications regarding the IP protection class apply for versions featuring a properly assembled male connector.
- Assembled pressure switches DG 3, DT 11, DG 1 are supplied as standard with a DIN connector; pressure switches DG 51, DG 6, DG 7 and DT 2 are supplied as standard with an M 12 connection.

**Connection pattern**

## 3 Parameters

### 3.1 General data

Designation	Valve bank
Design	Segmental construction; up to 10 valve sections
Model	Manifold mounting
Material	Steel, zinc-nickel coated
Attachment	see Chapter 4, "Dimensions"
Installation position	Any
Ports/connections	<ul style="list-style-type: none"> <li>▪ P. = Pump</li> <li>▪ R. = Reflux</li> <li>▪ A, B = Consumers</li> <li>▪ S. = Accumulator</li> <li>▪ M. = Pressure gauge</li> </ul>
Hydraulic fluid	Hydraulic fluid, according to DIN 51524 Parts 1 to 3; ISO VG 10 to 68 according to DIN ISO 3448 Viscosity range: 4 - 400 mm <sup>2</sup> /s Also suitable for biologically degradable hydraulic fluids type HEPG (polyalkylene glycol) and HEES (synthetic ester) at operating temperatures up to approx. +70°C.
Cleanliness level	<b>ISO 4406</b> <u>20/17/14...18/15/12</u>
Temperatures	Environment: approx. -40 to +80 °C, hydraulic fluid: -25 to +80 °C, pay attention to the viscosity range. Start temperature: down to -40 °C is permissible (take account of the start viscosities!), as long as the steady-state temperature is at least 20 K higher during subsequent operation. Biologically degradable hydraulic fluids: note manufacturer specifications. With consideration for the seal compatibility, not above +70°C.

### 3.2 Pressure and volumetric flow

Operating pressure	Connection P: $p_{\max} = 400$ bar Connection R: $p_{\max} = 50$ bar Connection A, B: $p_{\max}$ according to the circuit symbol and actuation
Flow rate	$Q_{\max} = 30$ l/min

#### NOTICE

Observe the specifications of the attached directional valves and upstream hydraulic power packs.

### 3.3 Weight

Connection block	Coding	
	A5 (A8)	= 0.8 kg
	A9	= 0.3 kg
<b>End plates</b>	1, 1L	= 0.3 kg
	2	= 0.8 kg
	4	= 1.2 kg
	6	= 0.4 kg
	8, 80, 8W	= 3.5 kg
	80(8W) / EM 21 D(DS)	= 1.3 kg
	81	= 0.8 kg
	88, 880, 88W	= 3.5 kg
	880(88W) / EM 21 D(DS)	= 3.8 kg
<b>Sub-plates</b>	/01, /02	= 0.6 kg
	/0, /1, /2, /3, /4, /6, /8, /9	= 0.8 kg
	/5	= 1.4 kg
	/10	= 2.7 kg
<b>Intermediate plates</b>	Z 5	= 0.8 kg
	Z 52	= 0.9 kg
	ZPL/MVE(X) 6	= 2.3 kg
	ZPL/V, ZPL/S	= 1.1 kg
	ZPL/P4, ZPL/P45	= 2.0 kg
	CZ, CZA, CZD, LZ	= 2.3 kg
	CZX, CZAX, CLX	= 1.6 kg
<b>Reactive plate</b>	NG 6X	= 0.3 kg
	NG 6X PA, NG 6X PB, NG 6X AT	= 0.4 kg
	NG 6X PA 22	= 1.0 kg
<b>Directional valves</b>	according to type, see corresponding publications	

## 4 Dimensions

All dimensions in mm, subject to change.

### 4.1 Connection block

### Extension

Coding 1

Coding 2

Observe the document B 5488 "General operating instructions for assembly, commissioning, and maintenance."

### 5.1 Intended use

This product is intended exclusively for hydraulic applications (fluid technology).

The user must observe the safety measures and warnings in this document.

**Essential requirements for the product to function correctly and safely:**

- ▶ All information in this documentation must be observed. This applies in particular to all safety measures and warnings.
- ▶ The product must only be assembled and put into operation by specialist personnel.
- ▶ The product must only be operated within the specified technical parameters described in detail in this document.
- ▶ All components must be suitable for the operating conditions when using an assembly.
- ▶ The operating instructions for the components, assemblies and the specific complete system must also always be observed.

**If the product can no longer be operated safely:**

1. Remove the product from operation and mark it accordingly.
  - ✓ It is then not permitted to continue using or operating the product.

### 5.2 Assembly information

The product must only be installed in the complete system with standard and compliant connection components (screw fittings, hoses, pipes, fixtures etc.).

The product must be shut down correctly prior to disassembly (in particular in combination with hydraulic accumulators).

**⚠ DANGER**  
**Sudden movement of the hydraulic drives when disassembled incorrectly**  
 Risk of serious injury or death

- ▶ Depressurise the hydraulic system.
- ▶ Perform safety measures in preparation for maintenance.

#### 5.2.1 Maximum adjustment travel of the throttle screw

1 Red ring

When the throttle screw has been unscrewed to the extent of the maximum permissible adjustment travel (general figure  $a_{max} = 5 \text{ mm}$ ), a red marker ring is visible. The maximum adjustment travel must not be exceeded, because

- unscrewing further does not achieve any further change in the flow cross section that influences the  $\Delta p$  value.
- at high pressures there is a risk that the throttle screw will be ripped out (because there are too few turns of the thread engaged).

This risk must be pointed out in the operating manual or operating instructions for the system:

**⚠ DANGER**  
**Sudden movement of the hydraulic drives.**  
 Risk of serious injury or death.

- Do not unscrew the throttle screw via the red marking ring.

### Adjusting the throttle screw

To avoid leakage of oil, proceed as follows:

1. Slightly slacken the seal-lock nut (17 mm).
2. Use a hex wrench (5 mm) to adjust the throttle screw.
3. Tighten the seal-lock nut.

## 5.3 Operating instructions

Observe product configuration and pressure/flow rate.

The statements and technical parameters in this document must be strictly observed.

The instructions for the complete technical system must also always be followed.

### ! NOTICE

- ▶ Read the documentation carefully before usage.
- ▶ The documentation must be accessible to the operating and maintenance staff at all times.
- ▶ Keep documentation up to date after every addition or update.

### ⚠ CAUTION

#### **Overloading components due to incorrect pressure settings.**

Risk of minor injury. Parts may burst or fly off, and uncontrolled leakage of hydraulic fluid.

- Pay attention to the maximum operating pressure of the pump, valves and fittings.
- Always monitor the pressure gauge when setting and changing the pressure.

## Purity and filtering of the hydraulic fluid

Fine contamination can significantly impair the function of the product. Contamination can cause irreparable damage.

### Examples of fine contamination include:

- Swarf
- Rubber particles from hoses and seals
- Dirt due to assembly and maintenance
- Mechanical debris
- Chemical ageing of the hydraulic fluid

### ! NOTICE

#### **New hydraulic fluid from the manufacturer may not have the required purity.**

Damage to the product is possible.

- ▶ Filter new hydraulic fluid to a high quality when filling.
- ▶ Do not mix hydraulic fluids. Always use hydraulic fluid that is from the same manufacturer, of the same type, and with the same viscosity properties.

For smooth operation, pay attention to the cleanliness level of the hydraulic fluid (cleanliness level see Chapter 3, "Parameters").

Additionally applicable document: [D 5488/1](#) oil recommendations

## 5.4 Maintenance information

Check regularly (at least once a year) by visual inspection whether the hydraulic connections are damaged. If external leakages are found, shut down and repair the system.

Clean the surface of the device regularly (at least once a year) (dust deposits and dirt).

## 6 Other information

### 6.1 Circuit example

#### Ordering example:
